

10. Types of operating systems based on user and task handling

Single User and Multi User Operating System: There are various types of operating systems, and one key distinction is between single-user and multi-user operating systems.

- a. **Single-user and single task operating system:** Manages the computer for one user to perform one task at a time (e.g., early versions of MS-DOS). CUI
- b. **Single-user and multitask operating system:** Allows one user to run multiple applications simultaneously (e.g., modern versions of Windows or macOS). GUI + CUI
- c. **Multi-user and multitask operating system:** Enables multiple users to run multiple applications concurrently, managing resources and permissions for each user (e.g., UNIX, Linux, Windows Server). GUI + CUI

CUI : Character User Interface | GUI : Graphical User Interface
